** risik based pesticide, limit value according to Ph.Eur. calculated via ADI (assumed daily uptake: 5g)
*** risk based pesticide, ADI not determinable, limit value: 0,01 mg/kg (pesticide not permitted 396/2005)
Due to technical limitations, the LOQ of the pesticides chlorothal-dimethyl, cyfluthrin, flycytrinate and tau-fluvainate is above the Pharm. Eur. limit but below the toxicological limit (calculated assuming a daily dose of 5 g). Furthermore, the LOQ of the pesticides methoxychlor, mirex, chlordane (sum of cis-, trans- and oxy-) and pentachloroanisole is above the established limit specified by Pharm. Eur. The pesticide tetradifone is not measurable due to the complexity of the matrix (see INC No. 210482).
